

# LawPro in the Cloud

Practice and Case Management Software on managed servers via the Internet for a low monthly subscription – no capital spend on hardware or software

With a Hosted LawPro subscription, all you need is a computer and an Internet connection. Our hosted servers are part of Amazon's proven network infrastructure and are configured with LawPro and Microsoft Office. Everyone in your firm can access these servers to run LawPro, share documents and manage cases. Just log in from wherever you are, whenever you want, without being tied to your desk. The LawPro hosted service desktop looks and feels just like the Windows desktop people are accustomed to working with every day.

**LawPro from Pace Professional Systems**

## Hosted LawPro

Hosted LawPro is an Internet-based subscription service that provides a trouble-free alternative to purchasing your own servers and applications.

Even though access is provided via the Internet, a hosted solution should not be confused with a web-based application. The concepts are similar, but the solutions are not. As an example, compare the user-interface of Outlook to the interface of web-based email such as Hotmail or Google Mail. The two applications are very different. A hosted solution is just like the software that you would find installed on a standard network in any law firm. The only real difference is that you access everything via the Internet. You just log into your virtual desktop, hosted on one of our servers, and get unlimited use of LawPro and Microsoft Office as if it was on your own Windows computer desktop. It's that simple. Whether you are a sole practitioner who works from the office and from home, or a firm with dozens of users spread throughout multiple offices, everyone can seamlessly share applications and data – just like you had a server in your own office, only better.

### No Capital Outlay

You can have access to the very best hardware, operating and application software without paying out large amounts of your capital to purchase these and pay for the installation and upkeep of them. You simply pay a monthly charge per user and you can be up and running straight away.

### Predictable, Flexible cost

Your subscription can be modified or cancelled at any time. If you need to add users on a temporary basis, they can be added and removed as required. If you decide that a hosted solution is no longer right for you, we can move it on to your in-house network.

### Software Rental

LawPro integrates with Microsoft Word, Excel and Outlook to provide comprehensive case management and document creation functionality and the licence costs for the use of these Microsoft applications is included in your monthly subscription. This means that the only application that you need to have on the computer accessing the Internet is a browser but you still have access to all the same application software and documents and files no matter where you are. The computer can be a Windows PC, Mac or Netbook – it just has to have a browser.

- Server and Disk Storage
- Platform Management
- Microsoft Windows Server
- Microsoft SQL Server
- Monitored Backup
- LawPro Licence
- Support and Updates
- Word, Excel and Outlook

### Security

Our hosted service runs on servers provided by Amazon Elastic Compute Cloud one of the largest providers of hosted servers. We operate these in conjunction with our partners Accesspoint Technologies, specialists in all aspects of cloud computing. The Amazon Service Level Agreement commitment is 99.95% availability. Your data is backed up daily and the backups are stored on separate servers.

### Operational Support and additional services

The hosted software model means that we effectively become your in-house IT department with access to fault fix and tune all aspects of the network providing your service and all of the software that runs on it. This relieves you of all concerns and un-planned costs associated with using the software. For an additional charge, we can provide book-keeping services or short term help or advice.

### Who will this help?

Hosting will not be for everyone. If you have made a big recent investment in network and application software then you need to get a return on that but sole practitioners and start-up firms can be up and running with no capital costs and can work from anywhere. Firms with a branch network who find the cost of servers and network infrastructure prohibitive can benefit from access to top of the range servers with no capital outlay. Firms moving on from outdated hardware and application software can avoid the capital spend associated with a big replacement of their IT infrastructure.

## Scalability

We can scale our servers to meet practically any demand. If your requirements change and you need more disk space or additional processing power, the request can usually be fulfilled overnight. Whether you have one user, or one hundred users, our servers are ready to deliver the power and performance that you require today and well into the future.

## Free Trial

We can arrange for you to have use of the system on a no-obligation trial basis. If you contact us to arrange a demonstration of the software we will then provide you with a time-limited guest log-in.
